

Know-WareTM

Warehouse Management System (WMS)

Know-WareTM is a sophisticated, new-generation warehouse management system providing a totally integrated solution to meet your warehouse management needs of today as well as your needs in the new millenium.

**Super
Scaleable**

Know-WareTM's flexible design suits installations ranging from the smallest distributor up to the largest warehouse complex. It supports seamless growth so that as your warehouse throughput demands increase Know-WareTM provides the extended support you need.

Functional

Know-WareTM offers the full range of warehouse management capabilities providing increased efficiency in stocktake, receiving, picking, dispatch, transport, cross docking, profiling and management reporting.

**Ultra
Flexible**

Know-WareTM is compatible with most corporate MIS strategies. It supports a choice of operating systems (Unix, Windows NT); database suppliers (Oracle, Informix, Sequel Server); RF equipment (Symbol, Intermec); and conveyor systems (Dexion, Mannesman-Dematic).

**Increased
Productivity**

Know-WareTM increases shop floor efficiency by eliminating the need for your receiving and replenishment staff to individually label cartons. Know-WareTM tracks and manages items in the warehouse in multiple locations using existing product codes or supplier codes.

**Internet Based
Ordering**

Internet support is provided to allow customers to place orders direct to the Warehouse Management System via the world wide web providing your business with a simple solution to internet service.

Integration

Know-WareTM provides total integration in your warehouse management and materials handling operations from receiving right through to the dispatch loading system. CobraTM compliant interfaces ensure uniformity between Know-WareTM and your suppliers or customer systems.

Know-Ware™ Specifications

- ◆ Know-Ware™ eliminates the need to individually label cartons and containers on the receiving dock thereby improving receiving efficiency.
- ◆ Know-Ware™ tracks and manages items in the warehouse in multiple locations using existing product codes or supplier codes.
- ◆ Know-Ware™ can be easily tailored to individual needs through its state-of-the-art object technology.
- ◆ Know-Ware™ provides a high speed response for the most frequently used operations by sharing the load over multiple processors.
- ◆ Know-Ware™ is Y2K compliant.

Don't let computers dictate your warehouse operations. Your warehouse management system should assist your operations, not add extra tasks.

Know-Ware™ removes the requirement to label cartons and containers with a specific identifier removing the requirement to uniquely label all items on the receiving dock thereby improving your receiving efficiency.

Know-Ware™ is able to track and manage items in the warehouse in multiple locations without the requirement of unique labelling. Thereby reducing costs.

Know-Ware™ is designed using the latest in object technology, allowing easy modification and enhancement, as well as simplifying testing and debugging, providing you with the comfort of knowing that your system is bug free.

Know-Ware™ provides rapid response for those operations which are most frequent, and can guarantee response times due to the distributed nature of its design sharing the load over multiple processors as demand dictates.

Integrated support for assembling of products from basic component lists at specified assembly points allows manufactured products, and promotional kits to be assembled prior to dispatch.

Location profiling allows stock levels to be maintained in desired locations, and automatically generates restocking requests from suppliers if required.

Operating System : Unix (Solaris, SCO, HP/UX, Linux),
Windows NT 4.0, Windows NT 5.0
Database System : Oracle, Informix, Sybase, MS SQL Server
RF Equipment : Symbol Spectrum24, Intermec
Convey or Vendors : Dexion, Mannesman-Dematic
User Interface : Win95/98, WinNT4/5, (XWindows to follow)

Bush Life Pty Ltd was established in 1990 with the main focus as a sub-contracted organisation developing large scale computer systems. Prior to incorporation it had been travelling in the guise of Microcomputing Services and Fased Systems since 1984.

The name **Bush Life** was chosen as it represented the idea that the systems we develop should be easy to use, reliable, and accurate, which would allow the system administrators to "go bush" without cause for concern knowing full well that the computer system they left behind would continue operation without fault or failure of software components.

Features

Inwards Goods

- ✓ Delivery Scheduling
- ✓ Delivery Notification
- ✓ Receipt Verification
- ✓ Receipt Processing
- ✓ Cross Docking
- ✓ Goods Storage

Outwards Goods

- ✓ Order Consolidation
- ✓ Transport Documentation
- ✓ Order Storage
- ✓ Dispatch Handling
- ✓ Transport Loading
- ✓ Transport Interface

Picking

- ✓ RF Picking
- ✓ Pick to Light
- ✓ Trolley Picking
- ✓ Paper picking
- ✓ Weight Verification
- ✓ Order cubing

Warehouse Operations

- ✓ Replenishment
- ✓ Relocation
- ✓ Reporting
- ✓ Profiling
- ✓ Stocktake
- ✓ Product Assembly
- ✓ Conveyor Diversion
